HI,

This is a simple question but I'ven't done interfacing before. I have written the code to perform zoom, pan, contrast adjustments, bringing up the next slice at run time. But all these are controlled by mouse in each program. I want to link them all together in one program. Can anybody tell me, how the link has to be given to each buttons to perform the zoom mouse actions when zoom button is pressed once or so on.

Please help me with this.

Thanks for ur help,

Cheers,
Akhila.
