HI,
 This is a simple question but I'ven't done interfacing before. I have
written the code to perform zoom, pan, contrast adjustments, bringing
up the next slice at run time. But all these are controlled by mouse
in each program. I want to link them all together in one program. Can
anybody tell me, how the link has to be given to each buttons to
perform the zoom mouse actions when zoom button is pressed once or so
on.

 Please help me with this.

 Thanks for ur help,

 Cheers,
 Akhila.
