Subject: Emacs idl.el and idl-shell.el at fermi
Posted by chase on Fri, 28 Oct 1994 18:37:05 GMT

The most recent versions of idl.el and idl-shell.el are available via
anonymous FTP at
fermi.jhuapl.edu

in directory: pub/idl_emacs

There is also a file idl-mode.txt at that location explaining idl.el.

As I posted previously, the files are also available at
eos.crseo.ucsb.edu in directory pub/idl

idl.el is an Gnu Emacs mode editing IDL or PVWAVE/CL .pro files. It
does automatic indentation, template insertion, abbrev expansion,
movement and marking commands, comment formating, highliting, and has
menus.

idl-shell.el allows IDL to be run as a subprocess of Gnu Emacs in a
buffer. It has abilities for interactively setting breakpoints,
".run"ing regions, automatic scrolling to errors, menus, etc. It
probably needs a lot of work, but it is very usable particularly for
iterative code development.

Let me know if you have any comments, problems or experience bugs.
