I've recently put an image viewer which can read Analyze files as well as the standard formats onto my web site at

http://www.nottingham.ac.uk/~njzalm/idl_files.htm

The viewer is still being developed so it is a bit buggy in places (mainly in dealing with true colour images). The Analyze routines which the viewer uses are also on the web site and should be reasonably robust. I've tried to deal with 2d, 3d and 4d images in a sensible way and hopefully the problem with big-endian and little-endian formats has been dealt with.
