Using an AXP, OVMS 1.5 and IDL 3.6, READ_GIF works fine for me when reading GIF89a files with the command:

```
IDL> read_gif,'gdn1:[images.gif]triton.gif',image,r,g,b
```

where triton.gif is a GIF89a file, (verified using DUMP). Have you tried imaging the file using XV or some other utility?
