
Subject: Chain-Link Algorithm for Perimeter

Folks,

I have a blob (naturally) and I want to know the pixels, in order, that describe the perimeter of the blob. The output of the Contour command, etc. is inappropriate, in this case.

I think what I want to use is the Chain-Link Coding algorithm of R.L.T. Cederberg as described in The Image Processing Handbook by John Russ. Has anyone coded this up in IDL by any chance?

I've been known to pay for code that saves me a ton of time. :-)

Cheers,

David
