From the IDL FAQ:

T08. Is there a major mode for editing IDL code in Emacs?

Yes.

Chris Chase ([chase@jackson.jhuapl.edu](mailto:chase@jackson.jhuapl.edu)) has written idl.el for editing IDL code. He has also written idl-shell.el for running IDL as an inferior process under emacs. These can be found at:

[eos.crseo.ucsb.edu:pub/idl/idl.el](http://eos.crseo.ucsb.edu:pub/idl/idl.el)  
[eos.crseo.ucsb.edu:pub/idl/idl-shell.el](http://eos.crseo.ucsb.edu:pub/idl/idl-shell.el)

Note that a major mode exists also for PV~WAVE, see the IDL FAQ.  
Hope this helps
