Ronn Kling also has a book on calling C from IDL:

Author: Ronn Kling
Title: Calling C from IDL - Using DLM's to extend your IDL code
Summary: (from www.kilvarock.com)

This 74 page book is written for anyone that wants to be able to call C
programs from IDL. Using very simple examples written in C the reader will
be able to create and pass scalars, arrays, strings and structures back and
forth from IDL to C. The code is written for IDL version 5.3 and later but
can be made to run on earlier versions with only minor modifications.
Nearly 1000 lines of source code are provided on the accompanying disk with
a makefile for all UNIX platforms, com file for VMS, Visual C++ 6.0 project
for windows, and a Code Warrior 5 project for the Macintosh. This code can
either be received on a 3-1/2 inch floppy or CD

ISBN: 0967127025
