```

If you didn't want to bother with the one minute job  
of adding a COLOR keyword to ERRPLOT, you could always  
do this:

```
loadct, 39
!p.color = 0
!p.background = 255
plot,x,y,xrange=[0,4], yrange=[0,4]
errplot,x,y+error,y-error
```

Cheers,

David
