Subject: controlling dialog widget size

Hello,

Is there a way to ensure that my modal dialog widget will fit on any display screen? I have a modal dialog which is arranged in a column. On most displays, the whole widget fits on the screen. But on some smaller displays, the widget is too tall to fit on the screen, and thus, the "OK" button at the bottom of the widget cannot be selected.

I realize that I could arrange the widget into two columns so that it is shorter and wider. But what I'm really interested in is a general way of ensuring that a dialog will fit on any screen. Should I check the screen size and check the size of the top level base and rearrange the dialog if necessary? Can you add a scroll bar to a dialog? Any other ideas?

Thanks!

Virginia Rogers
