Hello all,

I'm another lurker drawn out to ask for help. I think this is more of a maths question rather than IDL, but as I'm working with IDL and this seems to be the most friendly newsgroup I know of, I thought I'd try here!

Does anybody have the algorithm for the discrete sine transform coded in IDL. If I understand correctly it can be done (with some redundancy) by using the FFT - but I'm not sure how!

Thanks in advance for your help,

Matt
