Dear Guido

next trial,

I don't know much about PV-WAVE but I hope you have something like
CATCH or ON_ERROR

May be something like this will do the job

FUNCTION is_valid,id

```
    errvar=0
    CATCH,errvar
    IF errvar NE 0 THEN RETURN,0
    WIDGET_CONTROL,id,get_value=v
```

```
    RETURN,1
END
```
