The reason for a lack of response yet may mean that others are as confused as I am about what you are asking about. It sounds to me like your regions are contiguous to each other, but touching other regions. If so, then a simple WHERE function can pull out all the pixels with a particular value. Or, HISTOGRAM could do it all at once. If you need the indices of the pixels of a particular value, you can obtain them with the REVERSE_INDICES keyword.

Cheers,

David
