Is there anyone out there working on/providing an emacs package for MATLAB similar to idlwave?

Having recently (being forced to!) moved to MATLAB from IDL, I am a little disappointed with the matlab-mode and shell files provided at RSI, I miss the ease of use and support of the idlwave setup! Looking at the source files for idlwave it looks like a bit of a monster to try and convert this into something similar for MATLAB, especially when there is work to be done (but that hasn't stopped me before!)

Any help or information would be much appreciated.

Slighly, Mark.
