
Subject: Cursor jumping annoys me

Hi everybody,

when using GET_KBRD the cursor seems erratically jump back into the source code. This is very annoying when you just want to separat different program steps and maybe wait for a key to be pressed, and instead of continuing with the program you start "editing" the source code.

Does any one know why this jumping from command line to editor happens, and maybe how it could be avoided? Please refer directly to

Gerd.Wellenreuther@desy.de

Thanks

Gerd
