There was a article on dynamical data structures where one wishes to handle different arrays with different sizes without creating a predetermined array with a fixed size. That's one of our chalanges with our analysis program we are trying to create. Obviously we can use Handlers, however we have IDL 3.5 on network and only IDL version 3.6 has Handlers. IDL 3.6 is inompatable with our Dec-windows (anyways, long story). I do have somewhat two solutions to the problem. If anyone would like for me to share them, let me know. Additionally If anyone has a solution, let me know to.
