Subject: Re: how to modify the default 'printf' format
Posted by Don J Lindler on Tue, 04 Jun 2002 17:53:24 GMT

You could use the $ format code. For example

```
openw,1,'junk.txt'
for i=1,10 do printf, 1, i, format='(I5,$)'
close,1
```

would put all of the values on the same line even through printf was called
10 times.
