Subject: cd bug in IDL 5.5 Posted by Wolfgang.Dobler on Mon, 03 Jun 2002 15:29:24 GMT View Forum Message <> Reply to Message
Has anybody encountered this one before:
idl> cd, '/'
only moves one directory up under IDL 5.5 (5.4 was OK).
The problem is that I have (and need) '//idl' in my !path; is there a workaround to get this directory which may vary, depending on where I currently am still included into !path ?
Wolfgang
