
Subject: cd bug in IDL 5.5

Has anybody encountered this one before:

```
idl> cd, '../..'
```

only moves one directory up under IDL 5.5 (5.4 was OK).

The problem is that I have (and need) '../..idl' in my !path; is there a workaround to get this directory -- which may vary, depending on where I currently am -- still included into !path ?

W o l f g a n g
