Does anyone know how to put special characters in the axis labels when you make a postscript plot in idl? I need to label one axis as angstroms and I can't seem to be able to find a way to put the ascii code for the angstrom symbol in the text string which describes the x-axis. How do I let idl know that I want ascii symbol 197 in my string and not "197"? I have looked all over in the documentation and can't find how to do this. Any help would be greatly appreciated.
