
Subject: BUG in PV-Wave 7.5: Print,0.1 produces 0.0000

Hi all,

I seem to have found a serious bug in PV-Wave 7.5 on WinNT:

Start WAVE and enter PRINT,0.1 twice, you usually get the output

```
WAVE> 0.100000  
WAVE> 0.100000
```

But when you select a certain printer as Windows default printer (in my case a LaseJet 4050 N PCL 6) you get the following output:

```
WAVE> 0.000000  
WAVE> 0.100000
```

Can anybody help?

Guido Vent
