Hot on the heels of the large IDLWAVE 4.13 release, which was haunted by triskaidekaphobia, version 4.14 cleans up a few of the new features and includes a few bug fixes:

- * Better handling of multiple *Examine* buffer windows, allowing you to resize them without it being auto-sized on each examine. A frame containing *Examine* with only one window will be used preferentially.
- * Key commands "c" and "q" clear the old contents and close the current *Examine* window, respectively.
- * Continued statements at the end of continuation lines, ala:

```
a=1 & b=2 & frobnicate, a, $  
      b
```

now have indentation correctly calculated.

- * Class-qualified method procedure calls now have continued indentation correctly calculated:

```
object->myClass::theMethod, a, $  
      b
```

As usual, you can find the updates, and the answers to life, and how to live it, at <http://idlwave.org>.

Enjoy,

JD
