Hi! all,

I had been trying to run a C program(i was passing arguments from call_external) and ended up with the following errors. Can anyone kindly help me in overcomming(where to look in the C code)these errors.

=====

=====

ERRORS are as follows:::::::::::::

ld.so.1: /packages/envi/idl_5.5/bin/bin.solaris2.sparc/idl:

fatal: relocation error:file

/users/geomatics/casi/idl_hdf/call_tst/my_program.so:

symbol vector: referenced symbol not found

Killed

=====

what is the meaning of a relocation error?

how can i make the referenced symbol available?

im using 'gcc' and my compilation command looks as follows:::

=====

=====

gcc -fpic -shared -o my_program.so my_program.c -lm

-L/mydirectory_for_object_files

-I/mydirectory_for_included_header_files

=====

=====

Any help is greatly appriciated

RC
