Subject: Debugging w/widgets
Posted by mallozzi on Mon, 14 Nov 1994 21:22:22 GMT

One of the strengths of IDL that I like is that I can use STOP
statements in my procedures/functions to examine local variables
for debugging purposes. I recently started to program with widgets, and
I find that STOP now stops in XMANAGER. This seems like a major step
backwards. What's the deal?
