Hi ,

Yes, I searched the whole code thoroughly, bus I cannot find any "execute" statement. Also I get this error at different types of statements as I have written in my previous mail. Those statements are not long assignment statements or anything.

The thing is, I get these errors only when I try to run it from Run menu in IDL. If I give .GO in command line, it starts normal execution. Has anybody seen this before ?

Thanks,
Asti
