This has been discussed in the past.
Try searching this ng on google for "Program Code Area Full"

Search for the following culprits in your code:

@some_file
OR
very long assignment statements (lots of \$'s)
OR
dummy = execute(some_string)

You say you are not using execute, but you also said that your are using someone else's code. Have you thoroughly checked (case insensitive grep) that there are no executes hidden somewhere?

-k.
