Hi all,

Having just re-read the dimensional juggling tutorials posted by JD, I noticed that in IDL 5.5 (Linux) the limit to the practical concatenation dimension was increased from 3 up to 8 ;) Being one of those people who occasionally use more than 3 dimensions, this makes my life a whole lot easier.

Of course, don't try and go for 9...

```
IDL> a = findgen(20)
IDL> print, [[[[[[[[a]]]]]]]]
Segmentation fault
```

Does anyone else observe the same?

Cheers,
Randall
