Subject: Limiting concatenation IDL 5.5

Hi all,

Having just re-read the dimensional juggling tutorials posted by JD, I noticed that in IDL 5.5 (Linux) the limit to the practical concatenation dimension was increased from 3 up to 8;) Being one of those people who occasionally use more than 3 dimensions, this makes my life a whole lot easier.

Of course, don't try and go for 9...

IDL> a = findgen(20)
IDL> print, [[[[[[[[a]]]]]]]]]
Segmentation fault

Does anyone else observe the same?

Cheers, Randall
