Silicon & Carbon

Is there any way to use the FORMAT keyword (as used in PRINTF() and STRING() ) to force printed output to contain a sign.

If

a = 12.3

Then I want the print to produce

"+ 12.3"

and a = -12.3 should give me "- 12.3"

In reading the documentation on format codes, I could not find any reference to sign at all, but I have the feeling I am missing something obvious.

Niel
