
Subject: widget_table without scroll bars

Hi all,

I would like to use Widget_table (OK, I know it's not very wise) to display a 4x4 array in a widget. It's not editable and has a fixed size.

The documentation says that scroll bars will appear only if necessary but whatever combination of keyword (Xsize, scr_xsize, scroll_Xsize...) I use, I can avoid having both X and Y scroll bar. The widget table is part of a column base and does not even occupy the full width of the column. Is there any foolproof way to make those darn scroll bars disappear (or rather, not appear)?

Any help greatly appreciated.

Cheers,
