Subject: switching PS device from color to b/w?
Posted by nobody@nowhere.com (S on Mon, 24 Jun 2002 05:16:51 GMT

Once I write a color image to the ps device (using set_plot, 'PS'), I
cannot get the idl session to re-set to b/w, is there such a command? Right
now I'm starting a second idl session and doing all the greyscale work
there. Basically, I'd like to send an option like /nocolor to the ps device
so it will stop making color postscript. Is there any such command?
I'm using idl 5.2 :(
