Hello, all,

When I run the program aviKRtest downloaded from
www.kilvarcok.com/freesoftware/dlms/avi.htm

I got the error messages:

% AVI_OPENW: Unable to create avi compressed stream
% AVI_PUT: Expression must be an array in this context: AVIPARAMS.
% Execution halted at: AVIKRTEST

Did anybody met such situation before? Could you let me know how
did you solve it?

Thanks a lot.

Helen
