: Hi all...

: I'm setting up IDL for the first time on an IBM RS6k machine. When I
: try to start IDL at the csh prompt, I get the following....

: %idl
: Could not load program /usr/local/lib/idl/bin.ibm/idl
: Symbol _XmStrings in idl is undefined
: Symbol XtStrings in idl is undefined
: Symbol XtShellStrings in idl is undefined
: Symbol XmTextEnableRedisplay in idl is undefined
: Symbol XmTextDisableRedisplay in idl is undefined
: Symbol XmTextFindString in idl is undefined
: Symbol XmChangeColor in idl is undefined
: Error was: Exec format error

: Now, I've setup IDL on SGI, HP and SUN machines, and it's always gone
: smooth as silk. I don't understand what's going on here.

: Any ideas anyone?

At a guess:

- 1) The idl executable was built to use shared Motif & Toolkit libraries and
- 2) Either you don't have them on your machine or they aren't in the expected place.

N.B. This is a guess based on experience with other utilities on other machines.
