Hi all...

I'm setting up IDL for the first time on an IBM RS6k machine. When I try to start IDL at the csh prompt, I get the following....

```
%idl
Could not load program /usr/local/lib/idl/bin.ibm/idl
Symbol _XmStrings in idl is undefined
Symbol XtStrings in idl is undefined
Symbol XtShellStrings in idl is undefined
Symbol XmTextEnableRedisplay in idl is undefined
Symbol XmTextDisableRedisplay in idl is undefined
Symbol XmTextFindString in idl is undefined
Symbol XmChangeColor in idl is undefined
Error was: Exec format error
```

Now, I've setup IDL on SGI, HP and SUN machines, and it's always gone smooth as silk. I don't understand what's going on here.

Any ideas anyone?
