Hi all...

I'm setting up IDL for the first time on an IBM RS6k machine. When I try to start IDL at the csh prompt, I get the following....

%idl

Could not load program /usr/local/lib/idl/bin.ibm/idl

Symbol _XmStrings in idl is undefined

Symbol XtStrings in idl is undefined

Symbol XtShellStrings in idl is undefined

Symbol XmTextEnableRedisplay in idl is undefined

Symbol XmTextDisableRedisplay in idl is undefined

Symbol XmTextFindString in idl is undefined

Symbol XmChangeColor in idl is undefined

Error was: Exec format error

Now, I've setup IDL on SGI, HP and SUN machines, and it's always gone smooth as silk. I don't understand what's going on here.

Any ideas anyone?
