Hello, All,

I have a large (e.g, 160, 120) two dimensional integer array and a small (e.g, 10, 10) two dimensional integer array. Now I want to do some thing like patter match. My problem is how I extract a temporary two-dimensional array with the same width and height as the small one from the bigger array dynamically?

Thanks very much for your help,

Helen
