Subject: error bars

I'm looking for a simple way to make *both* X and Y error bars. The
USERLIB error bar routines only supply Y error bars (why anyone would think
that's sufficient I have no idea, grumble grumble). One program I'm using
draws them by individually connecting each plus & minus value - is there no
way to do the whole array at once?

Thanks,
  Vince, who is completely bewildered by the lack of X error bar plotting
capability in a multitude of packages. Does everyone besides me live in a
perfect world?
