In a multiple plot, is it possible to do OPLOT on a plot other than the last one? I have tried resetting !P.MULTI(0), but OPLOT ignores it.

```
IDL> !p.multi(2) = 2
IDL> plot,findgen(11)
IDL> plot,findgen(21)
IDL> !p.multi(0) = 2
IDL> oplot[0,10],[10,0]
```

Overplots in the lower plot!

How can I overplot in the first plot?

Any (working) suggestion will be welcome.
