
Subject: How to pick columns in a base widget?

Hello,

I have a base widget with a 3 column structure:
`tlb = WIDGET_BASE(column=3)`

is there an easy way to choose in which of the 3 columns the child widgets will appear? I don't want IDL to pick, I want to do it myself! For example, how do I put a button widget in the column of the middle?

Thanks in advance.

Luciano.
