
Subject: UNCOMPRESS files on PCs

Folks,

I have reason to work with files that have been compressed with the UNIX "compress" command from my Windows IDL application. Has anyone written a Windows DLM, ala Randy Frank's gzip interface (found on Ronn Kling's web page) to work with this kind of compressed file? (Randy's DLM appears to work only with files compressed with gzip.)

Anyone want to make a couple of bucks writing me one? :-)

There are reasons why I want a DLM and not solutions that spawn gzip, etc., which I know can decompress these files.

Thanks for any pointers.

Cheers,

David
