I discovered the IDL\_TOOLS sound routines ( in the freeware section of [www.rlkling.com](http://www.rlkling.com)), and they do just what I was looking for-- I can now play my own beeps and boops in IDL. But it looks like IDL's native beeps and boops (like the one in the DIALOG\_MESSAGE function) go away when the IDL\_TOOLS routines are loaded. Is this a bug or a feature?

Matt Feinstein does not include his email address  
in the text of usenet postings.
