
Subject: Reading Wav files

This seems a trivial problem: the IDL 5.5 documentation gives the following syntax for reading sound .wav files:

Result = READ_WAV (Filename [, Rate])

So, when I try it, I get:

IDL> Result = READ_WAV("ramsay0150.wav")

% Variable is undefined: READ_WAV.

Have they switched the calling procedure name on us?

Thanks,

Mike Alport
