
Subject: Reading Wav files

This seems a trivial problem: the IDL 5.5 documentation gives the following syntax for reading sound .wav files:

```
Result = READ_WAV ( Filename [, Rate] )
```

So, when I try it, I get:

```
IDL> Result = READ_WAV( "ramsay0150.wav" )
```

```
% Variable is undefined: READ_WAV.
```

Have they switched the calling procedure name on us?

Thanks,

Mike Alport
