RSI has acknowledged that this* is an IDL bug and will fix it in IDL 5.6.
-David S.

* Phillip David's original description:

The code adds menu items when the user selects certain functions, then selects the new button by sending a fake selection event to it using `Widget_Control, send_event`. However, when I attempt to run this code under IDL 5.5, I'm getting a warning message about the menu being unrealized.
