Hello,

I'm using IDL 5.5 on a PC running Linux Red Hat 7.1

The problem is that when I launch idl, sometimes it's OK,
sometimes there is no answer, sometimes I got "segmentation
fault'!

But, when I launch "strace idl", it's all the times OK.

I think that there is a problem of incompatibility of
libraries, or a problem with flexlm?

Can somebody help me?

Thanks,

Emmanuel.
