Hi all,

I have a widget driven program that uses WIDGET_TEXT, and I noticed that in IDL 3.0 the type of structure returned is "WIDGET_TEXT", but in IDL 3.6 the type is "WIDGET_TEXT_CH" (or "WIDGET_TEXT_STR", etc). This program will be for general use, and it's not guaranteed that the users will have the latest version of IDL. What version did IDL make this change or what's the best way to handle this?

Thanks,

mallozzi@ssl.msfc.nasa.gov
