The ID must be the ID of a X window "visual". I don't recall now what this is exactly, but I'm pretty sure it is not the display number sequence you used. This is a number that the operating system assigns to a window when it is created.

You can probably use the GET_X_ID keyword when you create a window in IDL to see what one of these would look like. You will have to do some Motif programming, I guess, to get to it.

Cheers,

David
