Subject: Q: IDL matrix inversions ???

I was hoping someone out there might have had some experience with inverting large arrays in IDL? I am attempting to INVERT some 800 x 800 arrays using the standard IDL routine. Everything works fine, although extremely slowly (even on my ALPHA AXP workstation).

The MATHLAB invertion routines seem to do a much fater job? Has anyone looked into efficient matrix inversion in IDL?

many thanks in advance,

Paul Morris, Dept of Atmospheric Physics, University of Oxford
