Hi all,

I'm writing a program that uses the CW\_ANIMATE procedure to animate plots, then write them to an mpeg file. This is all working fine, but when i come to write the mpeg (via the save button in the widget), it only writes it at full speed (frame rate).... :-( I can view it fine at (say) 30% speed, but saving it as mpeg at that speed is a problem.

I was wondering, is there a way to write the mpeg at a specified % frame rate, ie 30% of full speed?

Many thanks in advance,

Manish.
