Hello,

I would like to compare two arrays of different size. What I want to know
is if the two arrays share ANY of the same values, regardless of index.

e.g.

Array1 = [1,2,3,4,5]
Array2 = [5,6,7]

Comparing these two arrays should return true because they both have the
value 5.

I know I could do this in a loop, but I need the speed and I'm sure IDL can
do this in one line. I'm just not sure how.

Thanks,

Sean Raffuse
